PEVIKON™ P682

Description

PEVIKON™ P682 is a paste making vinyl chloride homopolymer produced by the PEVIKON™ process.
It gives medium viscosity pastes with slightly dilatant flow behaviour at low plasticiser levels and excellent foaming properties.

Applications

PEVIKON™ P682 is recommended for chemical foam in flooring, artificial leather and wall coverings. It works excellent for chemical foam inhib
Due to the medium viscosity level it is also suitable for soft foams and in other soft applications like dipping, rotational moulding etc.

Typical Properties

Property	Unit	Value	Method
K-value		68	ISO 1628-2
Viscosity number	cm³/g	116	ISO 1628-2
Wet sieve retention (Retained on 63 micron sieve)	g/kg	4	ISO 1624
Volatile matter	g/kg	4	ISO 1269
